

SEE AIR DIFFERENTLY

AtmosAir is a long-standing leader in solutions for healthier indoor air. Through a multi-product portfolio delivering technology such as bi-polar ionization, powered filtration, ultraviolet-C (UVC), HEPA filtration, real-time monitoring, sensors and custom solutions, AtmosAir is bringing the benefits of improved air quality to life and proving a simple but powerful idea that **air isn't invisible**.

AIR PURIFICATION SOLUTIONS

Our di-electric barrier (DBD) bi-polar ionization solutions produce bi-polar ions when airflow is delivered over ion tubes that are mounted in the supply discharge. They operate only when air flow is present and should be interlocked with fan operation or controlled via an air pressure switch. With proactive and continuous ions sanitizing the air, BPI solutions can be installed in new projects or retrofitted for immediate application within an indoor space.

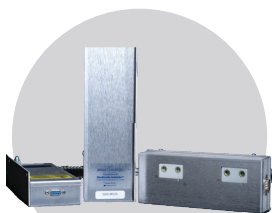

500 Series

FC-400

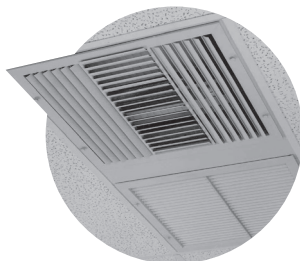

Matterhorn

BIOCLIMATIC ACTIVEOX BY ATMOSAIR

Our ActiveOx needlepoint bi-polar ionization series is a cost-effective solution that cleans indoor air by actively emitting ions into the space with the goal of neutralizing air pollutants and contaminants.

MC-880

Our MC-880 is a complete, self-contained recirculating air purification system that's compact, easy to install, and supports various filter options.

BIOTRONIC

Biotronic technology balances improvements in indoor air quality, odor control, emittance control, and OA reduction with a simple design and a low Total Cost of Ownership due to longer periods between service intervals.

IAQ MONITORING SOLUTIONS

Our indoor air quality monitors (IAQ) provide real-time reporting, helping you stay aware of the pollutants and odors in your air. These IoT-enabled air monitoring systems integrate with AtmosAir systems to effectively purify your air.

BUILT-TO-ORDER SOLUTIONS

Units are designed to address a wide range of contaminant removal and are available in multiple configurations from horizontal to vertical style for maximum flexibility. Selections include- BPI, PCO, UVC, gas filter media and a wide range of particulate filters. The Positive Pressure Unit (PPU) is an additional solution for controlled environments to protect sensitive and delicate equipment from corrosion.

PORTABLE AIR PURIFICATION SOLUTIONS

For smaller areas, our portable solutions are a perfect fit to help you continuously track and filter contaminants in your space. These standalone units bring powerful proactive protection to indoor venues.
