Rainier Summit R2

## APPLICATION

The AtmosAir Rainier Summit is a standalone self contained compact unit designed to increase ionization levels to restore indoor air to its natural state where no pollution or contaminants exist. The Rainier's patented active ionization technology has been rigorously tested and scientifically proven to be extremely effective at reducing harmful particulates, irritating volatile organic compounds (VOC's) and odors as well as significantly reducing mold, bacteria, viruses and germs in the air and on surfaces.

The R2 model is typically used for spaces up to 92.90 square meters (1,000 square feet) in size. As odor concentrations are greater the effective range of the unit will be slightly decreased.

The R2 model uses 1 MC7 B ionization tube and is equipped with a carbon impregnated filter. The tube will need to be replaced every 2 years to ensure peak performance. The filter at the air intake of the unit will need to be periodically replaced as required.
